

Solect provides proactive solar optimization and maintenance services to keep your solar energy systems operating at peak performance and help you achieve long-term financial success with your investment.

Production Monitoring & Reporting

1

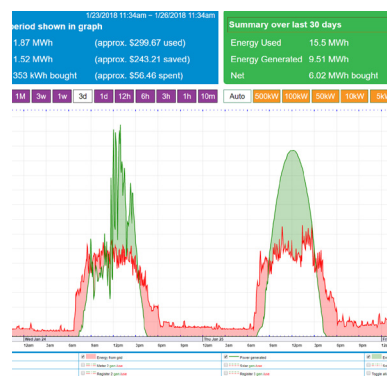

Through Solect's cloud based monitoring platform, we continually measure the performance of your solar system. Our multi-tiered approach goes beyond simply identifying systems that are not operating, by consistently measuring current output against projected and real-time weather-adjusted generation levels to ensure your array is achieving optimal production.

Rest assured - your system will never be left unattended. We proactively watch your system, identify potential issues or opportunities for improvement, and dispatch technicians accordingly.

2

Monetizing Electricity Production

Producing electricity is a major component of generating value with your solar investment. Through Solect's established relationships with each utility and state agency we help customers navigate the complex processes that govern the compensation associated with electricity production.

Net Metering

Solar system owners derive a financial benefit from net metering, which allows them to store credits from excess electricity production on their utility bill or pass them along to other accounts. As your trusted advisor, Solect helps establish and maintain the management of this process.

Utility Billing Support

Solect corrects billing issues, finds opportunities for cost savings, and ensures accuracy of our clients' electricity bills. Understanding the details of a utility bill coupled with our relationships with the utility companies allows us to quickly identify issues or discrepancies and establish a resolution for our customers.

Incentive Management

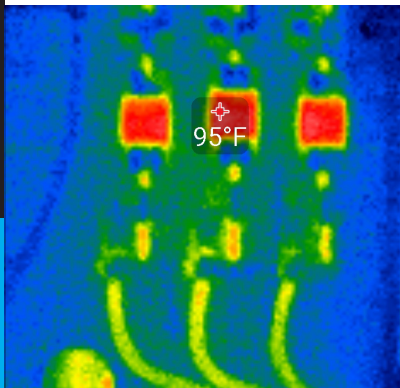

3

State incentives are an important component to the financial success of your solar system. Solect does not look at the management of incentives as a transaction process, but rather a partnership that takes a comprehensive approach to help you maximize your investment. We regularly verify that all incentives you are receiving provide accurate compensation for your solar production.

4

Scheduled Maintenance

With any mechanical system, proper upkeep is crucial to maintain optimal production, mitigate downtime, and provide a long life. Solect provides annual preventative maintenance site visits, which entails an exhaustive inspection of all mechanical, electrical, and PV components of your system by the best technicians in the industry using cutting edge technology.

Corrective Maintenance

5

Solect's dedicated in-house service team stands ready to respond to unanticipated issues that might arise with your system. Our Network Operations Center is in place to perform real-time monitoring, identify root-cause problems quickly, determine a course of action, and if needed, dispatch technicians to your site for comprehensive remediation.

6

Additional Services

Some of the additional services that Solect can provide include:

1. Energy Consumption Monitoring
2. Panel Cleaning
3. Spring System Checkup
4. Asset Management
5. Snow Removal
6. Vegetation Mitigation
7. Additional Inspections
8. Pest Control
9. Electric Vehicle Charging Stations
